

# Abdullah Ibrahim Ahmed

Full Stack Developer – .NET & Angular

Cairo, Egypt | 01010562454 | Gmail | [linkedin.com/in/abdalla-ibrahim-ai](https://www.linkedin.com/in/abdalla-ibrahim-ai) | [github.com/abdulllahhh](https://github.com/abdulllahhh)

## Summary

.NET backend developer who also builds Angular front ends – across an ERP/accounting platform, an e-commerce app, and a booking platform. Comfortable with Clean Architecture, CQRS, and caching on the backend, and component-based Angular development on the front end.

## Experience

### Full Stack Developer – .NET & Angular, Modular ERP System

Aug. 2025 – Present

*Part-Time, Project-Based, Remote | C#, .NET 5, ASP.NET Core, EF Core, ABP Framework, Angular 12, SQL Server*

- Implemented double-entry accounting for Journal, Payment, and Receipt Vouchers with General Ledger synchronization.
- Built a shared invoice-to-inventory workflow for Sales, Purchase, and Return invoices via interface abstractions.
- Developed a modular GL reporting engine with composable LINQ filtering, projections, pagination, and aggregation.
- Built Angular 12 admin features, including a diff-based sync for Branch-Department assignments that batches changes into a single request, integrated with backend APIs.

### Freelance Backend Developer – AI Image Generation Platform

Aug. 2025 – Sep. 2025

*Remote | C#, .NET 9, ASP.NET Core, EF Core, ASP.NET Identity, Stripe, Python/Flask, SQL Server, JWT*

- Integrated Stripe Checkout with signature verification, replay protection, and idempotent webhook handling.
- Built a transactional credit system that atomically records usage and rolls back failed AI generation requests.
- Secured the API with ASP.NET Identity, JWT rotation, account lockout, rate limiting, and custom email validation.
- Orchestrated AI inference by routing authenticated requests from the ASP.NET Core API to a Python/Flask microservice.

### DEPI – Full Stack Web Development

Jun. 2025 – Dec. 2025

*Ministry of Communications & IT (Government-Sponsored Training)*

- Ranked 4th in the Software Engineering track; selected as Top Performer across all tracks at the national ceremony.

## Projects

### Task Management REST API

Apr. 2026 – Jun. 2026

[github.com/abdulllahhh/TaskManagement](https://github.com/abdulllahhh/TaskManagement)

*.NET 8, ASP.NET Core, EF Core, PostgreSQL, Redis, System.Threading.Channels, Docker*

- Architected four independent layers (Domain/Application/Infrastructure/Presentation) with strict dependency inversion.
- Implemented JWT authentication and role-based authorization (User/Admin) with BCrypt hashing and a claims-based user accessor.
- Built an async background pipeline with System.Threading.Channels and a BackgroundService, decoupling task creation from processing.
- Implemented Redis cache-aside for task retrieval with a 10-minute TTL, invalidation on state changes, and ownership checks on cache hits.

### Bank ATM Management System

Jan. 2026 – Mar. 2026

[github.com/abdulllahhh/BankATM](https://github.com/abdulllahhh/BankATM)

*.NET 8, ASP.NET Core, EF Core, PostgreSQL, MediatR, Docker*

- Designed a modular backend (Card/Account/Transaction/ATM domains) applying DDD and Clean Architecture.
- Implemented CQRS with MediatR and custom pipeline behaviors for validation, logging, and transactional consistency.
- Modeled financial rules with aggregate roots, value objects, domain events, and the Specification pattern (sufficient funds, withdrawal limits, currency-safe operations).
- Built the persistence layer with EF Core and PostgreSQL; dispatched domain events via SaveChanges interceptors for module communication.

### Bookify – Hotel Reservation Platform

Sep. 2025 – Dec. 2025

[github.com/AhmedX2111/Bookify-Hotel-Reservation-System](https://github.com/AhmedX2111/Bookify-Hotel-Reservation-System)

*.NET 9, ASP.NET Core, EF Core, SQL Server, Stripe, Clean Architecture, JWT | DEPI Capstone, 6-member team*

- Automated the booking lifecycle with background jobs to expire unconfirmed reservations and update status without manual intervention.
- Integrated Stripe payment processing into the booking workflow, ensuring transactional consistency between payment confirmation and reservation creation.
- Developed secure RESTful APIs with JWT authentication and role-based authorization, and designed business validation workflows to enforce reservation rules and data consistency.

## Education

### BSc in Computer Science – Software Engineering

Sep. 2019 – Jun. 2023

Helwan University – Faculty of Computers and Artificial Intelligence

GPA: 3.63/4.0

*Military Service (completed)*

Jul. 2023 – Dec. 2024

## Technical Skills

- **Languages:** C#, TypeScript, Python
- **Frontend:** Angular, TypeScript, RxJS, HTML/CSS
- **Backend:** ASP.NET Core, EF Core, MediatR, SignalR, ABP Framework, FluentValidation
- **Architecture:** Clean Architecture, DDD, CQRS, SOLID, Repository/UoW/Specification patterns
- **Databases & Caching:** SQL Server, PostgreSQL, Redis
- **Messaging & Auth:** RabbitMQ, JWT, ASP.NET Identity
- **Tools:** Docker, Git, Azure DevOps, GitHub Actions
- **Spoken:** Arabic (Native), English (Professional)
